TRINIDAD

An efficient way to present all your messages quickly at a very low cost.

Tension of the print

The poster is clipped between 2 aluminium rails on top and bottom, locked with 2 plastic end-caps at both ends.
The upper and lower fixations are kept firmly in these rails, without any joints. This prevents the poster to float, unlike on similar banner stand systems.
Unlike other similar systems, this technique prevents the posters from floating.

Adjustable height

The strong telescopic pole made of aluminum maintains a uniform tension on the print whatever the length.

Stability

The pole is screwed directly onto the base and ensures a maximum stability.

Assembly

No tools are required to assemble the system . It can be set up quickly and easily onsite.
Entirely made in aluminium, the structure is very robust.

Lighting

To emphasize the impact of your messages, our lamp PR 200 can be installed as an option easily on top of the Trinidad pole.

Lamp delivered with a carry pouch.

Trinidad 80

Trinidad 80

Adjustable height : PR330 cm - height 150 to 200 cm - PR331 & 332 height 180 to 210 cm

Adjustable height to meet all request with one single product.

Media recommendation

Trinidad will work with most printing media and laminates available on the market, with a limitation to 200 gr PVC banner.

Carry bag.

Trinidad is delivered in a soft carry bag, with separate pockets for each component.
A rigid carton mandrel is supplied to roll up the print and preserve it from damage during transportation.
Ultra light-weight system.
Can be carried without any inconvenience.
